USER'S GUIDE

myPod.

Own your media. Hold it in one hand.

BEFORE YOU BEGIN

Own your media.

The songs and films on myPod are yours. Ripped from the CDs and DVDs on your shelf, bought straight from the artists and studios you love, kept on your own server at the quality you chose.

Yours to keep.

No subscription to cancel, no license that can expire, no album that disappears overnight.

Nothing in between.

No ads between songs, no feed, no algorithm guessing what you want next.

Every play is a choice.

You pick the album or the movie. You turn the wheel. You press play.

Your library. Your server. Your click wheel.

CHAPTER 1

Getting Started

Put myPod on your Home Screen, sign in to your own Plex server, and your collection is in your pocket.

Add myPod to your Home Screen

1. Open myPod's web address in Safari on your iPhone.
2. Tap the Share button, then **Add to Home Screen**.
3. Open myPod from its new icon. It runs full screen, just like an app.

Sign in to Plex

1. Go to **Settings** › **Plex** › **Sign In with Plex**.
2. Tap **Open Plex sign-in** and sign in on the Plex page.
3. Come back to myPod. It finds your server on its own.

Just looking? Until you sign in, myPod plays a small demo library with no sound, so you can try everything first.

No Plex? Use music on this phone

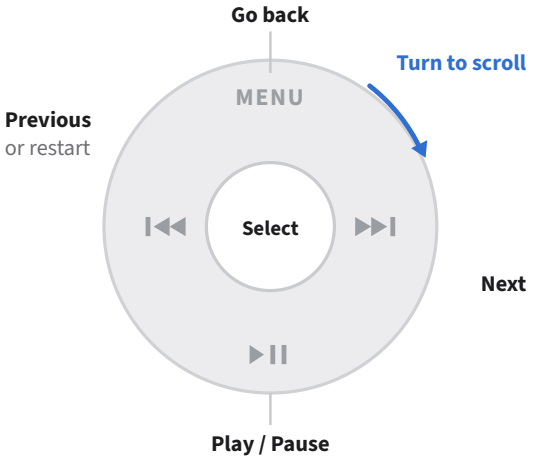

1. Go to **Music** › **On This Phone** › **Add Music**. (Not signed in? It's right on the sign-in screen as **Music on This Phone**.)
2. Pick songs from the Files app. You can choose many at once. On a computer or Android phone, **Add a Folder** brings in a whole folder.
3. myPod reads each song's name, artist, album and cover art, and keeps its own copy, so it plays even with no internet.

Good to know: MP3, M4A, AAC, ALAC, FLAC and WAV all work. Songs you add live only on that device. Remove them under **On This Phone › Manage**.

CHAPTER 2

The Click Wheel

Drag your thumb around the wheel to scroll. Press a part of it to act.

Clockwise moves down a list. Counterclockwise moves up.

Or just touch the screen

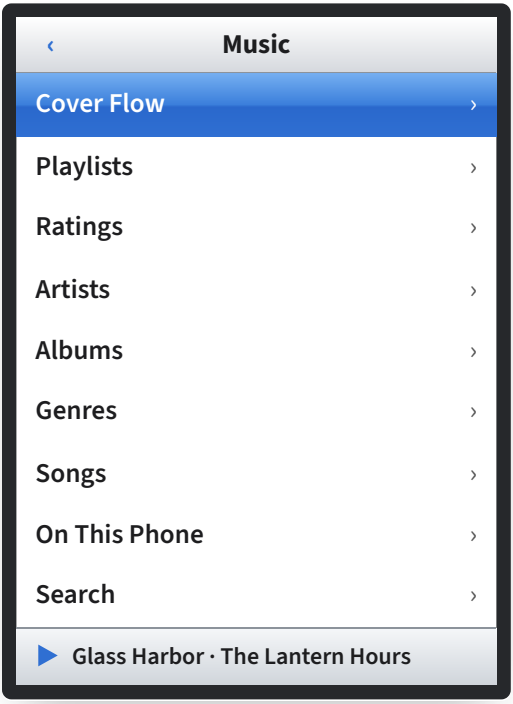

Choose	Tap any item.
Scroll	Drag the list up or down.
Go back	Tap the title bar. Look for the blue ‹.

Fast scrolling. Spin quickly through a long list and a big letter appears so you know where you are. “The Beatles” shows under B.

CHAPTER 3

Finding Music

Everything starts in **Music**.

The Music menu. The bar at the bottom shows what’s playing.

Genres Every genre in your library. Pick one for **Shuffle Songs**, or browse its Artists, Albums, and Songs.

On This Phone	Songs you've added from this device, with their own Artists, Albums, Genres and Songs.
Search	Type with the iPhone keyboard. Results show genres, artists, albums, and songs.
Shuffle Songs	On the main menu. Plays your library in random order.
Now Playing bar	Shows on every menu while music plays. Tap it to jump to Now Playing.

CHAPTER 4

Now Playing

Press the center button to change what the wheel does. A small pop-up at the bottom of the screen shows where you are.

Scrub	Turn the wheel to move through the song.
Rating	Turn the wheel or tap a star to give the song 1 to 5 stars. Turn all the way down to clear it. The stars then show under the album name.
Shuffle	Off, or Songs. Starts with the song you picked, then mixes the rest.

Repeat	Off, Track (this song again), or Album (the whole list again).

You can also tap a dot in the pop-up, or a choice right on the screen. After a few seconds myPod goes back to Normal on its own.

Volume lives on your iPhone's side buttons.

Ratings and rated playlists

Music › Ratings turns your stars into playlists that update themselves: **My Top Rated** (4 and 5 stars), one list for each star count, and **Recently Rated**. Each list starts with **Shuffle**, and they play on Plexamp too.

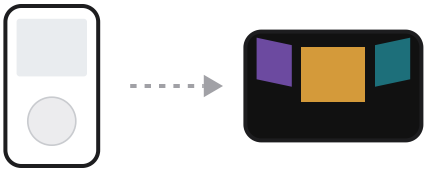

Your ratings are yours alone. They live on this myPod, not in Plex, so nobody else on your server sees them.

Your stars follow you. On a Plex server you own, myPod saves ratings in Plex itself, so they match on your phone, your computer, myPod Elite and Plexamp, and survive a deleted app. Songs saved on this phone, songs on a network share, and songs on a server someone shares with you keep their ratings on this device only. For those, go to **Settings › Ratings Backup › Back Up Ratings** and save the file to Files. **Restore from Backup** brings them back.

CHAPTER 5

Cover Flow

Turn your iPhone sideways and your albums fill the screen.

1. Swipe left or right to flip through albums. Flick to fly.
2. Tap the middle album to turn it over and see its songs.
3. Tap a song to play it. Turn the phone upright, or tap **Done**, to go back.

Nothing happens when you turn? Swipe down from the top-right corner and turn off Portrait Orientation Lock. You can also open Cover Flow from **Music** › **Cover Flow**.

CHAPTER 6

Videos

Your movies and TV shows, just like the iPod with video.

1. Choose **Videos** on the main menu, then **Movies**, **TV Shows**, or **Continue Watching**.
2. Pick something. It starts playing right on the iPod screen.
3. Turn your iPhone sideways to watch full screen. Tap the video to show the controls.

Play / Pause ▶❙❙ or the center button.

Title & time	The video fills the screen. Tap the picture to show the title bar and how far along you are. They tuck away after a few seconds.
Skip	Turn the wheel to move 10 seconds. ⏮ ⏭ jump 30.
Stop	MENU, or **Done** when you're watching sideways.

Picks up where you left off. myPod tells Plex how far you got, so your other Plex apps know too. Files your iPhone can't play directly are converted by your Plex server on the fly.

CHAPTER 7

Play On Another Speaker

Use myPod as a remote for Plexamp anywhere in the house.

1. Make sure Plexamp is open on the other device.
2. Go to **Play On** and choose it. A checkmark shows your pick.
3. Everything you play now plays there. Choose **This myPod** to play on your phone again.

AirPlay and Bluetooth

Choose **Play On** › **AirPlay & Bluetooth** and your iPhone's own speaker list pops up: HomePods, Apple TVs, AirPlay speakers, Bluetooth headphones and car stereos. Pick one and myPod keeps playing there. It works for videos too.

Plexamp or AirPlay? Plexamp sends the music from your server straight to that device, so your phone is only the remote. AirPlay and Bluetooth stream from your phone, so keep myPod open nearby.

CHAPTER 8

Extras

Games

Choose **Extras › Games**. There are four, and myPod remembers your best score in each.

Brick. The classic. Turn the wheel or drag on the screen to move the paddle. Press the center to launch the ball.

Music Quiz. myPod plays a few seconds from a random song in your library. Pick its name from four choices. The faster you answer, the more points you get. Ten songs a round. It plays on your phone, so it needs your Plex library, not the demo.

Stack. Falling blocks. Turn the wheel or drag sideways to move the block. Press the center or tap the screen to turn it. Press ⏭ or swipe down to drop it. Press ⏯ to pause.

Minesweeper. Open every square that isn't a mine. A number tells you how many mines touch that square. Tap to open, press and hold to plant a flag. Prefer the wheel? Turn it to move the box, use ⏮ and ⏭ to jump a row, press the center to open, and ⏯ to flag.

While you play Stack or Minesweeper, the ⏮ ⏭ ⏯ buttons control the game instead of the music. Press Menu to leave, and they work on music again.

Flip it over

Swipe sideways on the empty part of the case, like the space around the wheel, and myPod turns over to show its polished steel back, a few stickers, and an engraving. Swipe again to flip it back. The music keeps playing.

Sleep Timer

Choose 15, 30, 45, or 60 minutes, or **End of Song**. A small moon appears in the top bar while it's set.

> **Falling asleep to Plexamp in another room?** The timer works most reliably when music is playing on your phone itself.

CHAPTER 9

Settings

Desktop Mode

On a computer, myPod can become a jukebox window built for a mouse. See Chapter 10.

Case

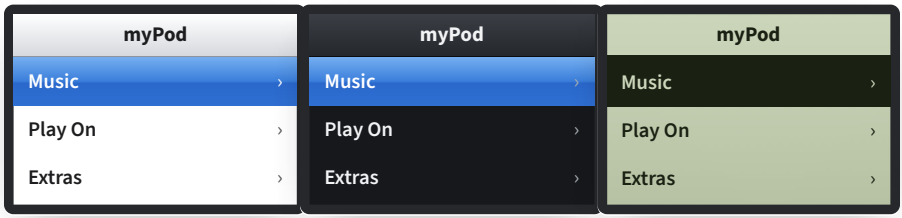

Fourteen finishes, including a Zune-style brown with a rounded-square pad the **BC Edition** (a clear amber-to-red shell, black wheel, red center and a polished red back), and the **JL Edition**, a beige 1995 desktop PC in your hand. Scroll the list to preview each one on your myPod, press the center to keep it.

Screen

Light is the 5th-generation look. **Dark** flips the screen to white text on black, easier on the eyes at night. **Match iPhone** follows your phone's own Light or Dark setting. **Classic** brings back the original black-and-white display.

Light, Dark, and Classic.

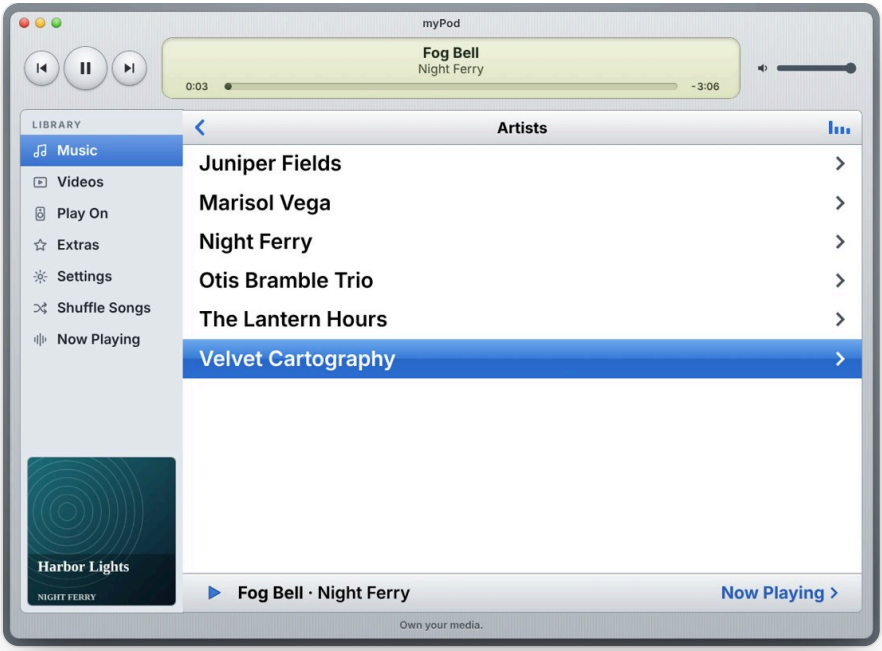

Server	Switch between Plex servers. Each one remembers its music library.
Corner	What shows in the top-right corner of the screen: the time, a little equalizer that dances while music plays, both (the clock that turns into the equalizer while music plays), the phone or Plexamp player the music is going to, or nothing.

Wheel Color	Give the click wheel its own color, or leave it on Match Case. Scroll the list to preview.
Center Color	Same idea for the center button. Mix and match: a red wheel with a white center on a black case, say.
Menu Art	Album art drifting beside the main and Music menus, like the iPod Classic. On from the start.
Large Text	Bigger, easier-to-read menus. On from the start.
Clicker	The little tick you hear as you scroll.
How to Use	A short version of this guide, right on your myPod.

CHAPTER 10

Desktop Mode

On a computer, myPod turns into a jukebox window built for a mouse. There’s no click wheel to drag. Everything is a click.

Desktop Mode. Elite gets the same window in starship colors.

Turn it on

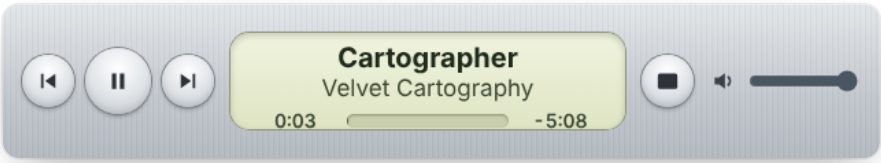

1. Open myPod in a browser on your computer.
2. Click **Switch to Desktop Mode** under the iPod, or go to **Settings** › **Desktop Mode**.
3. myPod remembers your choice. Next time it opens straight to the jukebox.

What's on the screen

Play buttons	Previous, play or pause, and next, at the top left.
Song display	The song, artist and a progress bar. Click the bar to jump ahead. Click the artist to switch to the album name. Click the time to switch between time left and total time.

Stars	Five stars at the right end of the song display. Click one to rate the song. Click the same star again to take one away.
Volume	The slider at the top right.
Library	Music, Videos, Play On, Extras, Settings, Alpha and Shuffle Songs down the left side. The album cover at the bottom opens Now Playing.
Hide the Library	Click the arrow next to LIBRARY to fold the list away for a wider view. Click it again to bring it back.
Lists	Click any row to open it. Scroll with your mouse. Click the title bar to go back.

The Mini Player

Just the controls, the song and the volume.

Click the **Mini Player** button next to the volume slider, or the yellow button in the corner. In Chrome and Edge, the Mini Player floats in its own small window above everything else. Close it, or click **Bring it back**, to return to the full window. In Safari and Firefox, the window shrinks to just the control bar. Click the button again for the full player.

Corner buttons

Red	Back to the iPod.

Yellow	Mini Player.
Green	Full screen.

Good to know: Desktop Mode works in any window bigger than about a quarter of a large monitor. Make the window too small and myPod switches back to the iPod on its own, then returns when there's room again. The Mini Player can go as small as you like.

CHAPTER 11

myPod *Elite*

Want extras like playing music straight from your own network share? myPod Elite is for you. It's the same myPod with features that take a little setup, for people who like to tinker.

Network Share	Play music from your own WebDAV server, with no Plex needed. Browse its folders under **Music › Network Share**.
Starship looks	Elite opens in the Away Mission case with the Starship Console screen. (Both are in regular myPod's Settings too.)
Musaka back	Flip it over: a dark gunmetal back engraved **myPod Elite · Musaka Edition**.
Its own space	Elite keeps its own settings, Plex sign-in, ratings and music, so you can keep both on your Home Screen.

Get myPod Elite

1. Open **ownyourmedia.club/elite** in Safari on your iPhone (or Chrome on Android).
2. Tap Share, then **Add to Home Screen**. It gets its own myPod Elite icon.

Set up a network share

1. Your share needs an address that starts with **https://**. Tailscale, a Cloudflare tunnel or a reverse proxy can give it one.
2. The server has to let myPod in. The easiest way is a recent version of rclone:
   ```
   rclone serve webdav /path/to/Music --user NAME --pass S
   ECRET --allow-origin https://ownyourmedia.club
   ```
3. In Elite, go to **Settings** › **Network Share** › **Connect a Share** and enter the address, username and password.
4. Open **Music** › **Network Share**, pick a folder, and press **Play All** or **Shuffle**.

Good to know: each song downloads fully before it plays, which is quick on a home network. Folders laid out as Artist › Album, with a cover.jpg in each album folder, look best. Elite's **Network Share** › **Setup Help** has the details for other servers.

CHAPTER 12

Alpha Testing

myPod is brand new, and you're one of its first testers. Thank you. Your notes go straight to BC.

Send feedback

1. Go to **Alpha** › **Send Feedback**, or **Alpha** › **Share an Idea**.
2. Pick **Something broke**, **An idea** or **I love this**, and write a few words.
3. Press **Send to BC**. Your mail app opens with the note ready. Press Send there.

No mail app on your computer? Press **Copy Note** and paste it into an email to bc@runawayanchor.com. Leave **Include device details** checked when something breaks. It tells BC what you were using, which makes the problem much easier to find.

What to test

Alpha › **What to Test** lists what BC most wants to hear about right now.

CHAPTER 13

Tips and Troubleshooting

Can’t reach Plex	Make sure your server is on and Remote Access is turned on in Plex. Then try **Settings** › **Plex** › **Reconnect**.
Song won’t play	myPod tries a second, converted stream automatically. If it still won’t play, the file may be damaged on your server.
Plexamp ignores myPod	Open Plexamp on that device, then pick it again in **Play On**.

Icon looks old	Delete myPod from your Home Screen and add it again from Safari. Your sign-in and settings stay.
Start fresh	**Settings** › **Plex** › **Sign Out**, then sign in again.

myPod.

Own your media.
